DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group II, claims 9-15 in Paper No. 10 is acknowledged. The traversal is on the ground(s) that there is no patentable distinctness or serious burden to search all inventions. This is not found persuasive because patentable distinctness has been shown by the examples given in the restriction requirement and there would be a serious burden to search other areas that do not include photoconductors.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 1-8 and 16-18 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 10.

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 9-15 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Sharp KK (JP 2000-66432, corresponding to US 6,143,453). Sharp teaches a photoconductor with an intermediate layer containing titanium oxide and a carboxylic acid in similar amounts. It is inherent that the same effects of high image quality and reduced image defects (Sharp abstract). In the alternative, it would have been obvious to one of ordinary skill in the art to use these known components in any amounts so as to perform the same known function in similar photoconductor applications.
